Dynamic Analysis Report

Generated 2026-11-12 03:03 | CAPE task 24

FINAL VERDICT

BENIGN

CONFIDENCE

83%

CAPE SCORE

1.7 / 10

Why this verdict

• CAPE score: 1.7 out of 10.
• No known malware family matched and no high-severity signatures triggered.

Confidence reflects how far the evidence sits from the malware/benign boundary. It is a heuristic, not a calibrated probability.

Sample details

File name	eicar.exe
File type	EICAR virus test files
Size	69 bytes
MD5	69630e4574ec6798239b091cda43dca0
SHA-1	cf8bd9dfddff007f75adf4c2be48005cea317c62
SHA-256	131f95c51cc819465fa1797f6ccacf9d494aaaff46fa3eac73ae63ffbdfd8267
Run time in guest	35 s
Total scan time	-

Behavior signatures (4)

Severity	Signature	Description
Low	stealth_network	Network activity detected but not expressed in monitor API logs
Low	queries_locale_api	Queries the computer locale (possible geofencing)
Low	stealth_timeout	Possible date expiration check, exits too soon after checking local time
Low	language_check_registry	Checks system language via registry key (possible geofencing)

MITRE ATT&CK techniques (0)

None reported.

Observed behavior

Commands executed (1)	"C:\Users\JW\AppData\Local\Temp\eicar.exe"
Files written (0)	-
Files deleted (0)	-
Registry keys written (0)	-

Mutexes (0)	-
Services created (0)	-

Network activity

Hosts contacted (0)	-
Domains (1)	domain=www.msftconnecttest.com, ip=23.211.242.121
HTTP requests (0)	-
TCP / UDP connections	0 TCP, 20 UDP

Dropped files (0) and extracted payloads (0)

No files dropped.

This verdict comes from automated dynamic analysis in a sandbox with a limited run time. Malware that waits, detects the sandbox or needs user interaction can look benign. A BENIGN verdict does not guarantee a file is safe.
