FINAL VERDICT

MALWARE

CONFIDENCE

78%

CAPE SCORE

7.3 / 10

Why this verdict

• CAPE score: 7.3 out of 10.
• 1 high-severity behavior signature triggered.

Confidence reflects how far the evidence sits from the malware/benign boundary. It is a heuristic, not a calibrated probability.

Sample details

File name	eicar.txt
File type	EICAR virus test files
Size	69 bytes
MD5	69630e4574ec6798239b091cda43dca0
SHA-1	cf8bd9dfddff007f75adf4c2be48005cea317c62
SHA-256	131f95c51cc819465fa1797f6ccacf9d494aaaff46fa3eac73ae63ffbdfd8267
Run time in guest	152 s
Total scan time	-

Behavior signatures (14)

Severity	Signature	Description
High	mountpoint_manager_access	Repeatedly opens the MountPointManager device to enumerate drive letters and resolve volume paths to discover all attached drives and network shares
Medium	privilege_elevation_check	Queries process token information to check for Administrator privileges or UAC elevation status
Medium	query_fips_reconnaissance	Queried the FIPS cryptography policy, can be used to adapt C2 network encryption or by legitimate encryption software
Medium	mountpoints_volume_discovery	Queries the mount points and then resolves volume paths to enumerate storage devices
Medium	per_file_acl_token_check	Performs high-volume NtQueryInformationToken calls for TokenUser and TokenGroups, indicative of wiper/ransomware checking whether it has write permission to each file
Medium	creates_suspended_process	Creates a process in a suspended state, likely for injection
Medium	resumethread_remote_process	Resumed a thread in another process
Medium	discover_registry_mount_points	Queries registry mount points to identify historical or connected removable/network drives

Severity	Signature	Description
Low	stealth_network	Network activity detected but not expressed in monitor API logs
Low	queries_keyboard_layout	Queries the keyboard layout
Low	queries_locale_api	Queries the computer locale (possible geofencing)
Low	antidebug_setunhandledexceptionfilter	SetUnhandledExceptionFilter detected (possible anti-debug)
Low	stealth_timeout	Possible date expiration check, exits too soon after checking local time
Low	language_check_registry	Checks system language via registry key (possible geofencing)

MITRE ATT&CK techniques (0)

None reported.

Dropped files (0) and extracted payloads (0)

No files dropped.

This verdict comes from automated dynamic analysis in a sandbox with a limited run time. Malware that waits, detects the sandbox or needs user interaction can look benign. A BENIGN verdict does not guarantee a file is safe.
